Getting started

How can this book help you?

Do you want to read and talk about computers in English? Perhaps you know *what* you want to say ... but not *how*, because you don't know the right words? *The Penguin Quick Guide to Computer English* can help you find the words that you're looking for.

What's in this book?

Each chapter looks at different areas relating to computers – things like hardware, word processing and the Internet. At the end of every chapter you'll find exercises to help you remember what you've learned. The book starts with buying and setting up basic equipment, goes through various uses of computers – at work, in education, looks at games and the

Internet, and finishes off with a look at the future. All the words in the book are also listed in the **Index**, where there is space to write them in your own language.

Why is this book called a Quick Guide?

- Because it's short and takes you straight to the words you need. What's more, it's small enough to carry around with you.
- Because it gives you a small amount of language that you really need to know, it is also quick to learn.

How do I use the book?

- Either read the book from start to finish or select a relevant chapter. For example, you may want to go straight to the chapter called

Fun and games, which presents useful language for using computers for recreational purposes.

- Do the exercises in the **Review** at the end of the chapter. Then go to the **Answers** section at the back. Were you right?
- Try out the language as soon as you get a chance.

I hope you enjoy using the book and that you find it useful.

Mouse to modem

Buying the basics

Well, there's the
HD5079Q ... or the
764PP ... or of course,
the LLT0127 ...

FOR SALE

*Used PC with 15" monitor,
mouse, keyboard and all
cables, £250 o.n.o. Very
good condition.*

*I also have a 56k modem
(for the Internet) and a
scanner (to copy pictures)
if you are interested.*

*Phone Angela
on 638290, evenings.*

monitor

mouse

keyboard

modem

scanner

Printers

*I want to print
some of these.
What's the best
printer?*

John: What **printer** should I buy?

Alex: Well, **dot matrix** printers are fast and cheap but the **output** doesn't look very clear. If you want high quality output you need a **laser** or **ink jet** printer.

John: Can they print in colour?

Alex: Yes, but colour laser printers are very expensive. Ink jet printers can print high quality colour and are much cheaper than laser printers.

printer

dot matrix

output

laser

ink jet

Disk drives

*And I use that
one to hold
my coffee.*

Alex: I've just bought these **disks** to **back up** my files in case my computer **crashes**.

Paul: Good idea. I bought a Zip **drive** last year because my files were too large to **save** to disk. Now the Zip disks are too small for my backups!

Alex: What are you going to do?

Paul: I think I'll buy a CD drive and **burn** the files on to rewritable CDs.

disk
back up
crash
drive
save
burn

Portable computers

*You can
work
anywhere
these
days.*

A **palmtop** is small enough to fit in your pocket and lets you carry all your vital information around with you.

A **laptop** has all the advantages of a **desktop** computer but is more **portable** and runs off batteries. With a **mobile phone** you can have immediate access to the Internet.

palmtop

laptop

desktop

portable

**mobile
phone**

Almost ready

*It's so easy to
set up your
own computer!*

Computer manual

- a) After you have connected the **hardware** (computer, monitor, keyboard, mouse, printer, etc.), you will need to **install** the system **software** on to your hard disk from a system disk or CD.
- b) You will then need to **restart** and your computer should **boot** automatically from the hard disk.
- c) When the operating system is successfully installed, you can install your computer **programs** and other software.

Invasion at home

All this technology and I get a power cut.

A recent Government report says that the number of household appliances containing **microprocessors** has doubled in the last five years.

Although twenty years ago video machines and radio-cassette recorders could record when the owner was away, today's washing machines, microwaves and fridges can all be **programmed** with the owner's instructions.

The change has hit children's toys and games too. Many of today's toys and games contain **silicon chips** and have **LEDs*** and **screens** that can display text and **graphics**.

your mouse.

Ask Nick the Nerd

*Nick the Nerd answers
readers' questions*

Q: How do text and pictures get into a computer?

A: Text and **images** can be **copied** from another disk or **downloaded** from the Internet. Text can be typed in or scanned and then converted to text using **OCR***.

Images can also be scanned or drawn directly on the screen. This can be done with a mouse and **mouse pad** but a stylus and **digitizing tablet** will give better control.

First day

Why do they
call these
workstations?

MEMO

To:	Tracey Potter
From:	Frank Malpas
Date:	25 March, 2001

You'll be at **workstation** number 25 this week. For user ID in Eagle we use the initial letter of someone's first name **dot** the first three letters of their surname; in your case, 'T.Pot'. It'll also be your e-mail ID. When you log on for the first time use **SESAME** as your password – you can change it to whatever you like afterwards. You can **access** the whole office **network** from your **terminal**.

Learning alone

*Sometimes CAL
is not enough.*

Computer Assisted Learning (CAL) techniques can provide many activities for learners.

Some examples:

- **Authoring** software allows teachers to assemble different kinds of exercises with their own materials.
- **Computer adaptive tests** give students fast and accurate indications of their ability.
- **Programmed learning** routines allow students to learn at their own speed.
- **Computer simulations** allow students to experience potentially dangerous situations safely.

Pictures

*They've
cropped
that
picture
badly.*

Ask Nick the Nerd

Q: What's the difference between **bitmap** and **vector** images?

A: Vector images are drawn according to a mathematical formula and look the same at any size. When you work with vector images you work with the whole image as an object.

Bitmap images are made up of **pixels** (picture elements) and you can change the colour of each individual pixel. Bitmap images are distorted if you change the size.

Both kinds of image can be **cropped**, making any or all of the edges of the image disappear.

Electronic lists

*Be courteous
– don't
flame others.*

From: "Michael Jones"
<m.jones@alpha.centauri.com>
To: <administrator_Condor-L@thu.edu>
Subject: Re: List rules
Date: Thu, 17 Aug 2000 07:16:36 +0200
X-Priority: 3

Welcome to the Condor-L discussion list.
The rules are very simple.

- **Post** messages to
<Condor-L@thu.edu>.
- No insults (**flaming**) or mass-mailing
of irrelevant material (**spamming**).
- If your mail is **bounced** back to us as
'undeliverable' three times we will take
you off the list.
- **Lurkers** (people who read messages
and don't post) are welcome – but
remember you can post too!
- For Help contact me at
<M.Jones@thu.edu>.

Michael Jones
mailto: Condor-L@thu.edu .

Text

Why are you painting a portrait in a landscape format?

Create eye-catching documents easily with our new budget word processing program, Textfine.

With Textfine you can:

- work in **portrait** or **landscape** format
- **customize** page sizes – make pages as large or small as you like
- **scroll** the visible screen horizontally and vertically
- **cut and paste** text and graphics between different Textfine documents
- store items on Textfine's **clipboard**
- import text or graphics from other applications

strike through

Adding interest

*Use bullets to
make your
point clear.*

There are many ways to make a text look more interesting. Some people sometimes like to start a paragraph with a **drop cap** (as at the beginning of this paragraph).

Other things you can do include:

- using **bullets** to make points stand out

using different fonts
and type styles

using **tabs** to
indent your text

By careful use of these tools you can create clear and stylish documents.

drop cap

bullet

tab

indent

Text tools

Additional features in Textfine:

- an extensive library of **clip art** livens up your texts 
- a dictionary, grammar and style checker to improve your writing
- a **thesaurus** helps you find the right word
- **style sheets** allow you to change document styles easily
- **mail merge** lets you integrate your address book with your mail
- an onscreen **word count** counts your words while you type
- **wizards** help you set up different types of document

Numbers

Typing
text
in a cell.

A: How's that spreadsheet coming along?

B: Don't ask! I've got a problem with a **formula** in one of the **cells**!

A: Let's have a look. Yes, here, look – you've left a bracket unclosed.

B: Thanks. I'll just set the **word wrap** on the text cells and I can print it out. Do you want the data displayed as a **pie chart** or a **bar graph**?

A: A pie chart will be fine.

A Complete these with words from this chapter.

- 1 Drag and is one way of transferring files from one folder to another.
- 2 You can copy text from one document to another using the and paste commands.
- 3 If you want to add simple images to a text document you can import art.
- 4 You can use or italic text to make a word stand out in a sentence.
- 5 You can show the relative proportions of mathematical data by using a chart.
- 6 If a page is displayed horizontally it is referred to as layout.

System failure

*You may
have a
software bug.*

WHEN ALL ELSE FAILS

If your computer **hangs**, freezes or you experience **system failure**:

- Restart the computer and run a disk repair **utility** to examine the disk and files for structural damage.
- Reinstall system software.
- If the problem continues, you may have a software **bug**. Try removing and reinstalling applications one at a time.
- Back up all essential files, reformat the disk and reinstall the software.

system failure

utility

bug

Sabotage

And when we get in there we'll go for the system files.

Ask Nick the Nerd

Q: What's the difference between a **Trojan horse**, a **worm** and a **virus**?

A: Trojan horses are programs that seem to do something useful or entertaining but can cause damage. Worms are self-replicating programs that live in active memory and are usually not noticed until system resources slow down or stop.

Viruses infect program files. If an infected file is passed to another machine the virus goes with it. **Attachments** and word processor documents containing **macros** can also carry viruses.

Hacking

Him?
Oh, he's a
Christmas
cracker ...

Ask Nick the Nerd

Q: What's the difference between **hackers**, **crackers** and **phreakers**?

A: Hackers love to explore computers and computer systems for their own sake. Some but not all are **nerds**. Most hackers are not criminals.

Crackers try to break security on computer systems – getting through **firewalls** and password systems, and are looked down on by many hackers as being dishonest and technically inferior.

Phreakers are basically interested in cracking telephone systems, once as a challenge, often nowadays for financial gain.

HOW SAFE IS YOUR COMPUTER?

Unless you are an expert, you may not know. But don't worry, we do – it's our business.

Let us tell you about:

- Data **encryption** and **decryption** software that prevents anyone reading your files without your permission
- **Secure server** facilities for online transactions
- The truth about the **cookies** that web sites leave in your computer
- How to get your own **digital signature**

Phone today on 043-8109 for free advice. And you'll never have to worry again.

Is it legal?

Software pirates.

Exclusive independent school White Cliffs College is today facing a £400,000 fine for failure to produce **site licenses** for software on its computer networks.

The case came to light when sixth-formers at the school were discovered trying to sell proprietary software in an IRC **Warez** channel commonly used for trading **shareware** and other commercially produced programmes. Material supplied by the students is said to have contained digital **watermarks** which clearly indicated that it was **pirated software**.

Review 9

Complete these with words from this chapter.

- 1 E-mail can contain macro viruses.
- 2 If you use multiple copies of a piece of software you need a license.
- 3 The police raided the office looking for software.
- 4 Antiobotix is a protection program.
- 5 Many files have an invisible which can track their distribution.
- 6 Many servers protect their users with a that can not be entered without an authenticated password.
- 7 A software bug can cause your computer to

Present
and
future

10

State of the art

Voice recognition software was becoming more common.

By the beginning of the 21st century, twin CPU computers had made **parallel processing** standard in the personal computer market. Voice recognition and **touch screen** technology was becoming more accessible although screen **resolution** was in most cases still limited to 1024 x 738 and limited **bandwidth** between ISP and consumer did not yet permit full live video transmission.

The most exciting innovation as the century dawned was the implementation of **Bluetooth** technology that would allow users to communicate between all their computer and telephone equipment without the need for cables.

parallel processing

bandwidth

Bluetooth

MP3 revolution

*Improved file
compression
techniques
were
welcomed.*

As more and more **infotainment** and **edutainment** networks emerged, the traditional divisions between computers, video, TV and telephone services rapidly blurred.

Improved file **compression** techniques and increased bandwidth also led to more and more pirated MP3 and MIDI **synthesizer** audio files on the net. Users quickly learned to **rip** files off CDs and convert them to the much smaller MP3 files, burning them onto CDs or uploading them to web sites where anyone could download them.

Future trends

OK, if you're
so smart
why can't
you get me
any money?

In the future we'll be able to choose between **wearable computers** and smaller and lighter portables with greater memory than we can imagine today.

We'll use **digital cash** for most things we buy, with electronic **smart cards** that can be recharged with credit at any convenient terminal.

With **network computers** we'll be able to work at any computer, anywhere, and with better **plug and play** between different types of computer, technology hardware incompatibility will be a thing of the past.

Close encounters

They're asking for tonight's lottery results.

London, 2004: First contact with Alpha Centauri

As the world reels over news of contact with the aliens transmitting from the region of Alpha Centauri, scientists are working round the clock on deciphering the content of these 'messages'.

Using techniques learned through research into **artificial intelligence** and **machine translation** the world's largest **number crunchers** are working full time on the problem.

One difficulty is the sheer volume of data, flooding in on parallel receivers with combined **real time** speeds of over 200 **gigabytes** a second, faster than ...
